

FASMA is a supplier of customized web- software development and offers high quality technology solutions, software products and Internet/ e-Business applications.

Established in 2000,
Fasma's area of
expertise is *web-based
applications.*

The screenshot shows the FASMA website interface. At the top, there is a navigation bar with links for Home, Map, and contact. The main header features the FASMA logo and a tagline: "...will work for you today, tomorrow and for years to come". Below the header is a menu with categories: corporate info, technologies, competencies, news, careers, products, and customers. The main content area is titled "Collection" and describes it as "everything you need for debt collection". It features three product cards: "Collector", "NBS", and "Debt Manager", each with a "product presentation" link. A sidebar on the left lists various services: Produce Fasma, Collection, Credit Information, Credit Application, Property and Appraisal, Insurance, Business Management, and Data Mining. A "Latest news" section on the right displays several news items with dates and titles. At the bottom right, there is a Microsoft Certified Partner logo.

- Content and Document Management
- Custom Advanced Workflows
- CRM
- Dynamic Forms

Working experience with some leaders from all over the world

With an experience of over 9 years in the web- forms area, Fasma ensures best solutions for the most complex and big clients' enterprises, qualified team as well as team availability in order to develop and customize the software systems in the shortest time possible.

The framework of our products is built to support

Multi Country concept

It has the complete technical approach for the companies with several branches, the data being stocked in the server found at the main center.

Multi Language

Based on Unicode platform it allows the viewing of all system content in any Microsoft supported language by simply adding it.

Multi Currency

Complete technical approach, having the possibility to add any currency any time, keeping at the same time a history of all exchange rates

Web- based

No need for installations on every machine, all you need is a web-browser and you are good to go.

Data Aggregation

All country databases are adapted to input their content into the central database.

From the Requirements Study stage, through research, analyzing, implementation and until the Project Post-implementation and Testing phase, work is executed by following the well-established methodologies and standards.

Starting with July 2004 we are Microsoft Certified Partner

The procurement of "Microsoft Partner" Certificate concurred to the company's expansion and its international recognition

ISO certified company

The Quality Management System (QMS) at FASMA enables it to deliver quality software and services to its clients.

Quality is an integral part of the software development process at FASMA and has a well established and tested set of project management methodologies, refined over the period of years by associating with leading global organizations.
